Saving the Earth

from the Comfort of Your Home

Home Director

The Connected Home Starts Here

Helping **to reduce greenhouse gasses,**

reducing dependency on fossil fuels and conserving energy are

easy with a few simple choices when planning your next home.

CF Bulbs and LED lighting. These are the new reality in homes, making your life brighter and more comfortable with less energy waste. Replacing just twelve 100 watt incandescent lights with CF bulbs can save up to $750 in energy bills over the life of the bulbs. Another option is to use an intelligent lighting system that turns on groups and scenes of lights for specific tasks or moods and also features one button to turn all lights off when you leave home. "Walking the beat" as the energy cop is a thing of the past.

Get on and off the grid. Solar is now available and affordable in your new home. The option to generate a percentage of your own power or even sell it back is a way you and your family can reduce or eliminate your energy bill and benefit the community. With options in generation capacity and an easy-to-understand monitor right in your home, you'll know exactly what you're doing to contribute.

Who said **being Green is boring?** With a Home Director connected home, you'll find the speed and flexibility of connectivity you would expect in a 21st century home. You can choose high-speed data, wireless computing, file and printer sharing, multiple phone lines for traditional and VoIP phones, and much more. Life and the information it delivers move pretty fast. Your home delivers at maximum speed.

A jazzy new direction **in sound:**

Multi-roommusic systems demand 1/4 the power of traditional box amps and speakers while delivering music to your whole house. With our DIGITALiFE™ Whole House Media solutions you get not only music, but multiple sources and control of those sources from iPods, Media Servers and A/V components. Add to that the ability to share your videos, music and photos with any computer or use our DIGITALiFE Players to watch them in HD on your television, and you've got the entertainment solution delivered like never before and all in an easy energy-saving way.

Protect your home, **protect the planet.**

Heating and cooling your home use more energy and drain more energy dollars than any other home system. Typically, 44 percent of your utility bill goes for heating and cooling. What's more, heating and cooling systems in the United States emit over a half billion tons of carbon dioxide into the atmosphere each year, adding to global warming. With Home Director your security system communicates with your thermostat and even your lights to save you money when you're not around.

Saving the Earth

If you think about it, there are two sides to that statement. At Home Director, we design solutions for homeowners which maximize the comfort, convenience, entertainment and security of their homes, all while trying to produce less waste and use less energy than ever before.

from the comfort of your own home.

Now is the time to make design choices for your home that not only add the luxury and comfort that technology affords, but actually reduce monthly utility demands and can add resale value. The art of living well is here... join us.

live well.
