VIDEONICS® MediaMotion™

Control Your VCRs and Camcorders

A/B Roll Control from Inside Adobe Premiere™ and Ulead MediaStudio Pro™

MediaMotion 3.0 gives users precise machine control of virtually any controllable VCR and camcorder from inside Adobe Premiere™ or Ulead MediaStudio Pro™. The MediaMotion software and patented AV/Net edit control cable technology provides accurate and flexible control of up to two sources and one record deck to automate batch-digitizing and print-to-video features.

Desktop VCR Control

MediaMotion gives you the power to control camcorders and VCRs using easy-to-understand control icons displayed on the computer screen, or directly from the movie capture window of Premiere or MediaStudio Pro. A simple click of the mouse plays, rewinds, stops and records. The patented AV/Net module and included Control-L cabling are all that's required to make the connection to two devices (add-on cables for other protocols are sold separately).

Automatic Batch-Digitizing

With MediaMotion, you can let your computer take over the tedious task of digitizing your footage. Reliably batch-digitize virtually any number of high-resolution clips. MediaMotion accurately searches for, retrieves, and records the clips you've selected, and it's all automatic! New record and pause/record features automate the Print-to-Video process of Premiere and MediaStudio Pro.
